

INOOK

S N O W S H O E S
2 0 2 2 • 2 0 2 3

The INOOK logo is displayed in a white, stylized, sans-serif font against a blue sky background with a bright sun and clouds. The background of the entire page is a scenic view of a snowy mountain range under a clear blue sky with a bright sun.

Priority to pleasures!

Also this year, Inook is expanding its range of multi-level rackets.

The children's range with a model for ados with a single buckle strap and for kids with an elastic strap.

Beginners need first and foremost a special product, light and easy to wear and suitable for sizes that can change very often.

We must also guarantee them maximum safety and, lastly, we must not forget the playful importance, snowshoeing is a game for them before becoming a sport.

The adult range is also evolving with the E-XTREM model offering a binding that goes from 34 to 51.

The evolution of colors and technical innovations will give the 2022/2023 range its own personality.

Finally, you will notice that the distribution area of Inook snowshoes continues to expand, proving that our technical and commercial strategy is constantly appreciated.

INOOK, real values

Energy, Passion and Innovation

Every year we go for another step. Real values get approval, and new developments are explored. Every year we talk with our sales partners, and as a producer we develop new ideas to satisfy their demands. That's how Inook proceeds, with the motivation to always innovate and to keep our ears open to the main players and the active community.

Made in the French Alps

The main shareholder of the INOOK Brand is also its manufacturer. Centralising in France conception, production, commercial and financial offices strenghtens INOOKs position in Europe. This proximity is the best guarantee in terms of supply, dialog and after-sales service. INOOK obtained the origin'ain label which attests to its french know-how.

"A little bit more"

Certain things are not so much to be explained, as to be felt.

Never the less it is a fact that the INOOK hiker shows strong motivation concerning the design and the technology. The pratical aspect of the products is often mentioned. Last but not least, both its passion for the nature and its passion for the details reflect a little different and much appreciated image.

Have a nice trip...

PROGRESSIVE

Axm (p.18)

Axl (p.19)

DÉCOUVERTE

Inook-Kid (p.20)

Inook-Ado (p.21)

All models (except the rental models, Inook-Ado and Inook-kid) are delivered in a snowshoes bag, where information about weight and shoes sizes are indicated.

Zoom

With a detailed observation of the Inook models, you will understand clearly the strengths of the brand: comfort and safety, in combination with innovations and technology.

Front tightening 45°

A precise and comfortable tensioning of the shoe, through two fastener straps in 45° angle.

This detail is crucial as it enables the perfect hold of the shoe without any point of pressure, as they can be very unpleasant at the end of the day. A real attention is paid to the shape of the foot as it can roll out naturally.

Shock absorber

Three shock- and noise absorbers are placed below the heel.

Tipp

The use of mountain or trekking shoes is strongly advised for all our snowshoes with the exception of the E-flex model which has a flexible binding plate, so we recommend soft shoes.

SP

Soft Pad

This central system of the shoe, offers great comfort.

It combines different kinds of plastic components, which can adapt and fit perfectly with the ankle. It can be placed precisely on the top of the ankle through a double regulation system on both sides.

Fine adjustments are made through a small lever; opening the binding is easy and immediate. Those who prefer a simpler model can choose between two other binding types:

- with double buckle adjustment,
- with single buckle adjustment.

The adjustment to the shoe size occurs in the simplest way, in pushing the heel part towards the shoe

or another possibility is to position the number of your shoe size in the little window on the binding plate.

AD

Aerotec Design

The profile of the frame shows a turned-up bow to keep the snowshoe constantly above the snow. The rear openings avoid any snow accumulation above and under the frame.

CMG

Concept Multi Griffes

6 steel spikes are assembled whilst plastics are still hot; they are oblong or conic. A front claw – either with three or five teeth – complements the hold with maximum grip.

CPD

Concept Profil Dentelé

Last complement of this concept is a denticulated frame profile insuring the best grip on any slope, and particularly whilst crossing steep slopes. The design of the teeth has been studied to reduce friction.

The automatic heel steps

An example of our Know-How patented worldwide

Auto Gliding System

Position surmount an obstacle

Walking position

Heel step in climbing position

Pressing the pole on the rear part of the lever is enough to change the position, without bending.

ASS

Auto Sliding System

Position surmount an obstacle

Walking position

Heel step in climbing position

This new ASS heel step has a larger support which is adapted to the e-flex. It is also operated with the pole, without bending.

E-flex

It's similarity with other Inook models should not hide main innovations.

- The orange translucent binding plate is made out a high quality material, slightly flexible and very resistant.
- The Pebax® Material provides the possibility of rolling out the foot without constraint. Shoes with soft soles can be used.
- The special attention offered to the sequined design.

ANTHRACITE GRAY
RAQ 027035

ASS AD CMG CPD SP

Kg 998 g x 2 45 > 120 kg 34 > 47

E-move

This atypical model is definitively aimed to fanciers of performance and sensations. Its exclusive concept relies on three main innovations:

AS EF NS SP

Kg 1 160 g x 2 45 > 120 kg 34 > 47

DUNHILL RED
RAQ 060033

Slope angle regulator

The laterally rotating central plate compensates the hill inclination. It tends towards the horizontal and supports a flat foot stance even during hill crossings. This ergonomical walking is joint friendly and gives a safe feeling.

EF

Ergonomic Frame

Asymmetrical frame to guarantee a uniform repartition of the pressure. The shape of our feet corresponds to the repartition of our body-weight on our feet. We have adapted the shape of the snowshoes to this essential element to ensure an even repartition of the body's weight on the snowshoe. Comfort and safety are improved.

NS

Natural Step

This double articulated joint enables the foot to roll-out naturally. The snowshoe is being pulled instead of lifted, it feels a lot lighter.

Freestep

Lightness feeling and stability

This alpine snowshoe is perfect for reaching summits. The Natural Step (see previous page) is associated to "metallic saws" or harsh irons and a light double ribbed frame ("perimetric frame") that grasps vertically in the snow. Its hold in steep slopes is brilliant.

DUNHILL RED
RAQ 075033

1 080 g x 2 45 > 120 kg 34 > 47

CHD

Harsh Irons with Different Saw Teeth

4 steel harsh irons made of 6 spikes are fixed under the frame. Disposed in 4 different directions to offer best grip, in whatever direction you walk.

Front and rear spikes are longer to always find grip in case of icy snow. They are exchangeable.

FreestepLight

Experienced hikers will understand immediately the interest of a smaller frame.

This version is meant for women and men with lighter weight; smaller, handier with exactly the same technology.

DUNHILL RED
RAQ 076033

960 g x 2 40 > 80 kg 34 > 42

Oxm

Perfect compromise for the alpin star

Athletes and powder fans will enjoy the unique performances of this model in terms of efficiency and weight. Its front bow is raised and strenghtened for a perfect fluidity, much appreciated in powder snow.
